

Using ADAPTIV™ biphasic technology, the LIFEPAK® 20 Defibrillator/Monitor offers both manual and AED modes for hospital and clinic settings. The system offers both monitoring and therapeutic functions and can help hospitals meet standards of the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) to have resuscitation services readily available throughout the hospital.

From arrest to defibrillation: three minutes or less is the recommended goal for hospitals.

You're committed to the highest standards of patient care in everything you do — including resuscitation services. Knowing this, Physio-Control, the world leader in defibrillation technology, designed the LIFEPAK 20 defibrillator/monitor with extensive input from clinicians around the world.

The LIFEPAK 20 is highly intuitive to use and adapts to various patient environments. It skillfully combines an AED function for the infrequent, BLS-trained responder, with manual capability so that ALS-trained clinicians can quickly and easily deliver advanced diagnostic and therapeutic care. It's two defibrillators in one.

Simple yet sophisticated, the LIFEPAK 20 enables clinicians at every level to focus on the most important task at hand — saving a patient's life.

The LIFEPAK® 20 Defibrillator/Monitor: The smart, flexible answer to your hospital's diverse defibrillation needs.
